Staying COVID-19 Secure in 2020
 We confirm we have complied with the government's guidance on managing the risk of COVID-19

FIVE STEPS TO SAFER WORKING TOGETHER

- ✓ We have carried out a COVID-19 risk assessment and shared the results with the people who work here
- ✓ We have cleaning, handwashing and hygiene procedures in line with guidance
- ✓ We have taken all reasonable steps to help people work from home
- ✓ We have taken all reasonable steps to maintain a 2m distance in the workplace
- ✓ Where people cannot be 2m apart, we have done everything practical to manage transmission risk

Summary of Infection Prevention Practices in Dental Settings

Basic Expectations for Safe Care

Guidance on infection control in schools and other childcare settings

Guidelines for Infection Control in Dental Health-Care Settings—2003

CDC. *MMWR* 2003;52(No. RR-17)
<http://www.cdc.gov/oralhealth/infectioncontrol/guidelines/index.htm>

This slide set "Guidelines for Infection Control in Dental Health-Care Settings-Core" and accompanying speaker notes provide an overview of many of the basic principles of infection control that form the basis for the CDC *Guidelines for Infection Control in Dental Health-Care Settings — 2003*.

This slide set can be used for education and training of infection control coordinators, educators, consultants, and dental staff (initial and periodic training) at all levels of education.

Introduction

These guidelines have been developed by the Dental Board of Australia under s. 39 of the Health Practitioner Regulation National Law as in force in each state and territory (the National Law).

The relevant sections of the National Law are attached.

Who needs to use these guidelines?

These guidelines are developed to provide guidance to dental practitioners or those seeking to become registered in the dental profession. They apply to all dentists, dental prosthetists, dental hygienists, dental therapists, dental specialists and oral health therapists.

These guidelines address how dental practitioners can prevent or minimise the risk of the spread of infectious diseases in the dental setting.

Summary

Dental practitioners must practice in a way that maintains and enhances public health and safety by ensuring that the risk of the spread of infectious diseases is prevented or minimised.

Infection control

1 Documentation

1.1 Every place where dental care is provided must have the following documents in either hard copy or electronic form (the latter includes guaranteed internet access). Every working dental practitioner and all staff must have access to these documents:

- a) a manual setting out the infection control protocols and procedures used in that practice, which is based on the documents listed at sections 1.1(b), (c) and (d) of these guidelines and with reference to the concepts in current practice noted in the documents listed under References in these guidelines
- b) the Australian and New Zealand Standard AS/NZS 4815 (current edition) Office-based health care facilities – Reprocessing of reusable medical and surgical instruments and equipment, and maintenance of the associated environment (dental practitioners work under AS/NZS 4815 unless they work within an organisation that operates under

AS/NZS 4187 (current edition) Cleaning, disinfecting and sterilising reusable medical and surgical instruments and equipment, and maintenance of associated environments in health care facilities)

(c) Australian Guidelines for the Prevention and Control of Infection in Healthcare published by the National Health and Medical Research Council (NHMRC) (available from <http://www.nhmrc.gov.au/publications/ynopnew/od3bays.htm>)

(d) The current Australian Dental Association Guidelines for Infection Control (available at: <http://www.ada.org.au>)

2 Behaviours

2.1 Every dental practitioner and student must:

- a) ensure the premises in which he or she practices are kept in a clean and hygienic state to prevent or minimise the spread of infectious diseases
- b) ensure that, in attending a patient, client or consumer, he or she takes such steps as are practicable to prevent or minimise the spread of infectious diseases
- c) act in accordance with the requirements set out in the four documents referred to in Section 1 Documentation of these guidelines
- d) be aware of his or her infection status for blood-borne viruses, seek expert advice appropriate for a dental practitioner infected with a blood-borne virus, for example a specialist medical advice or advisory panel if diagnosed with a blood-borne virus and cease to perform exposure-prone procedures if viraemic.

3 Declaration

3.1 Applicants for initial registration or renewal of registration as a dental practitioner or student will be required to make a declaration that they are aware of their infection status for blood-borne viruses and that they will comply with the Communicable Diseases Network Australia's Australian National Guidelines for the Management of Health Care Workers known to be infected with Blood-Borne Viruses and with the requirements of the Dental Board of Australia's Guidelines on Infection Control.
